Still trying to succeed online without a listserver? It ain't gonna happen! by Dr. Jeffrey Lant

Your #1 online success tool is a listserver. If you don't have one you are NEVER going to succeed online. Here's why.

A listserver is a handy piece of software which enables you, at the press of a single button, to deliver a message to every single person on any given list. The listserver is important because the list it delivers messages to is important. Indeed, I'll go so far as to say: the business is your list, the list is your business.

Companies which are making money online are making money because they're 1) building their crucial email list and 2) using a listserver to deliver regular messages to it.

What can these messages be?

- * a company newsletter
- * information about products and services
- * usage information, so that customers get more value from what they buy
- * specials, sales, offers, discount coupons, etc..

In short, the listserver enables you to run the most customer-centered business imaginable, keeping your vital information in front of prospects in ways impossible in the "real world" and for a trifling cost.

Still trying to succeed online without a listserver? It ain't gonna happen!

When you've got a listserver, you're able to wake up in the morning with a dandy idea for motivating your prospects... sit down at your computer and write your client-centered message (or reuse a message that has worked for you in the past), and, by hitting a single button, get that message out IMMEDIATELY to every single person on your list. Want to update prospects in the afternoon? No problem! Create another message and send it out to your list! Your prospects will have it in minutes!

Is this spam? CERTAINLY NOT! A listserver serves a SUBSCRIPTION list! People need to request to be on your mailing list. It's easy to add them — or they can add

themselves. It's equally easy to delete them if they don't want to be on your list anymore, so you're NEVER spamming anyone!

When you're using a listserver, you've got your #1 Profit Tool for connecting with prospects, bringing vital information to their attention when YOU like, both sending it with your listserver and directing them to whatever area of your website you want them to see.

Speaking personally, the apt use of listservers is what has turned our company — Worldprofit, Inc. at <http://www.worldprofit.com> — from a back bedroom enterprise into a multi-million dollar operation. That's why we include a listserver as standard equipment in our very popular ready-to-move-into, professionally designed e-properties at <http://www.trafficcenter.com/properties>

Let me make myself perfectly clear: IF YOU DO NOT HAVE A LISTSERVER, YOU ARE NEVER GOING TO SUCCEED ONLINE; listservers are THAT important!

Go get yours now at <http://www.trafficcenter.com/properties>
For personal assistance, <mailto:drjlant@worldprofit.com> with "I want a listserver" in the subject, along with your name, company, and phone number.

With your listserver, you'll finally begin to capitalize on the incredible economies and speed of online business. What are you waiting for?

Still trying to succeed online without a listserver? It ain't gonna happen!

The Critical Tool That Powers The List – The 13 Questions You Must Ask When Choosing A Listserver For Your Business

By Paula Morrow

Without a doubt, being able to market through email plays a critical role in how successful you will be on the internet. So, choosing the right listserver to power it will be one of your most important decisions.

So, which one to choose?

There are many worth consideration, so here is a list of 'filter' questions that will help you make your decision. Remember, no listserver has ALL of these features – prioritize their importance based on your business:

***Do You Want Your Listserver Located In Your Desktop, Or Hosted By A Third Party?**

A Desktop Listserver (as the name implies) is installed in your own desktop computer. ASP (Application Service Provider) programs are hosted on a separate server.

ASP enables a quicker distribution of email, since outside servers typically have access to faster internet connections. However, if you choose to use a desktop listserver, ask whether it distributes emails using multi-threaded internet connections (instead of sending out emails sequentially, one by one, does it search out different 'threads' and distribute multiple emails simultaneously, through your internet connection)?

***Does the Listserver Support Both Text and HTML Messages?**

Most emails are sent in simple 'text' format, though sending graphics, banners, etc., through HTML, is becoming more popular. Consider your current and future needs; many listservers offer both options.

***Does The System Support Multiple Languages?**

Group Mail, for example, currently supports 30 international character sets. Remember, the internet is a GLOBAL medium.

***Does It Have An Autoresponder Function For Automated Follow-up?**

***Does The Listserver Offer An Automated Subscription and Removal Support for Newsletters?**

Still trying to succeed online without a listserver? It ain't gonna happen!

At the bottom of newsletter messages, there MUST be a way for the recipient to unsubscribe, if they wish.

*Can Your Listserver Process and Remove 'Bounces' (Returned Emails)?

*Can New Prospects Be Added To An Opt-in List Automatically?

[NOTE: Make sure these last three functions can be applied to multiple mailing lists, email accounts and newsletters, if you have more than one site.]

*Does The Listserver Protect The Privacy Of Your Customer Data?

Unfortunately, there are some programs out there that expose client details. Make sure yours keeps your list detail confidential.

*Does The Listserver Limit the Size of Your List?

Some ASP services have a built-in ceiling of around 10,000 names/email addresses per account (if you have multiple lists, all names are included in this total). Many offer expansion options, at additional cost. Again, ask.

*Does Your Listserver Allow You To Do A Personalized/Customized Email Merge?

Some allow you to isolate the first name for salutations, others personalize using both first and last.

*Does The Listserver Offer Ways To Filter Your Mailings?

Can you filter your list to send messages, for example, to only those in a certain state or region?

*Can You Easily Import And Export Your Database?

Does the listserver have restrictions in the way an exterior database can be imported? This is important especially for an offline business coming online, that may have an existing, computerized customer list. Some are more flexible than others.

*Can You Easily Monitor The Status Of Your List?

Can you monitor list size? Daily sign-ups? Determine the number of recently unsubscribed? Determine the status of an email broadcast?

Here are a few services to start your research – click on the provided links to go to their sites and learn more:
