The Cure For Old Age

Did you know that aging begins at 30! And every second somewhere in the world someone turns 50! And the quality of life for the average person stops at age 51. After that, it takes medical intervention to manage their symptoms to maintain their "health". And only 1 in 10,000 people makes it to 100 years old... and a shocking proportion of those people who reach the age of 100 are very poor! "Aging is a barbarick phenomenon that shouldn't be tolerated in polite society," says University of Cambridge gerontologist Aubrey de Grey. I Gerald Armstrong the owner of Gen Cells Cures agree. The stem cell research including therapeutic cloning and genomics research needs to be done now to accomplish our goal of finding the cure for old age.

Why doesn't everyone want the cure for old age? You tell me I simply don't understand why more people don't want the cure for old age. So little money goes into research to cure old age that it's a crying shame! Maybe it's because people don't believe it can be done. Since the dawn of time there have always been critics and skeptics who sit at the sidelines and say it can't be done or that we are pushing snake oil cures etc. Make no mistake about it Gen Cells Cures has our critics. Food for thought about skeptics and critics: The difference between genius and stupidity is that genius has limits. Albert Einstein. Any sufficiently advanced technology is indistinguishable from magic. Arthur C. Clark. We can easily forgive a child who is afraid of the dark; the real tragedy of life is when men are afraid of the light. Plato. Only two things are infinite, the universe and human stupidity, and I'm not sure about the former. Albert Einstein. Science commits suicide when it adopts a creed. Thomas Henry Huxley. In questions of science, the authority of a thousand is not worth the humble reasoning of a single individual. Galileo Galilei. Main stream scientists are sometimes afraid to get involved in serious gerontology for fear of being branded whackos. Well. let me give it to you straight from the horses

The Cure For Old Age

mouth the technologies are now here to do the job. They are in our very own hands. I want to remind you that when Neil Armstrong (I like to call him Uncle Neil) became the first human to step foot on the moon, on July 20, 1969 I knew that humans would live to be 200 years old and beyond with just a little research. However since 1969 serious gerontology has been put on the back burner. Only in the past five years or so has the science of gerontology began to accelerate with the discovery of stem cells, cloning and rapid advances in genomics. With today's science nothing is impossible.

Lets talk about 1969 for one second, Viet Nam, Flower Power, free love, a new generation, my generation, we thought we would live forever, and we didn't trust any one over thirty. I was right there in Hait Ashbury. I know the younger generations since then have envied our time and they should, it was the life! Jimi Hendrix's guitar was screaming "All Along The Watchtower" and we still had Elvis too! Well, I am a baby boomer and want some of it back. Yes, I am young for 55 but I can see what's coming around the corner for me and my fellow hippies from 1969 (If they are still alive). And it isn't pretty. No matter what generation your from, just stop and imagine for one moment what it would be

like to have your youth back. Have you ever noticed how time flies like a jet airplane. Something has got to be done and we are going to do it right here in the labs at Gen Cell Cures.

How are we going to find the cure for old age?

Through stem cell research including therapeutic cloning and genomics research. The most difficult part of the nearly unthinkable has already been done. Through therapeutic cloning technologies we can take a patients cell back to the beginning of life. Now all that's lacking is to perfect these technologies and take them from the bench to the patient. The Koreans human cloning experiments have opened the door wider on therapeutic cloning. We here at Gen Cells Cures have found that the Korean's new technique of squeezing out the DNA from the egg cell works much better than sucking out the DNA with a tiny needle. Their cloning process was a spectacular achievement.

Our biologists can re-set your aging clock. It's just a matter of time. Take a look at your own clock. What time is it? What year is it? How old am I? Where has my life gone? If you want to get the straight scoop on aging contact Miller Quarles of the "Curing Old Age Foundation" or ask Harry Bernstein ("How Do I Move On Without My Soulmate?" Newsweek). From King Tut to Howard Hughes we all face the same dread ...No matter how well we succeed in life, we're all fated to loose it in the end to that pitiless serial killer- old age.

So is Gen Cells Cures suggesting there is a cure right now? Absolutely not, and the anti-aging clinics may be just a little bit ahead of their time. We do disagree with some mainstream scientists in that they do not believe aging can be researched as a disease. We believe aging is at the top of list of the deadly incurable diseases that can be cured. The cure is just around the corner. But the research has to be done and the sooner the better because time waits for no one, no matter how big your wallet is. If you don't reach into your wallet and do the right thing. Sooner or later you won't even be able to lift a finger to write the check. Age can and will kill you. Make no mistake about it aging is a disease to be feared. Yes, the disease of aging brings out the fear of God. However, I believe God wouldn't have given us the ability to cure aging if he didn't want us to find the cure. Scientists have succeeded in extending the life of some model organisms and humans are next. Currently there is no magic pill. The

The Cure For Old Age

magic pill will be found in research and to accelerate that research we are recommending private research. You have a family doctor and other specialists. The time has arrived for you to have your own life–sciences researchers. The future is in stem cell research, therapeutic cloning and gernomics!.

Growing old is not all fun. We're prone to rheumatism, gout, vision loss, hearing loss, and worst of all sexual disfunction. Some need new knees, new hips, a pacemaker. Aging can be cured the same as any other disease. There is a lack of funds and public support for genuine ant–aging research. Many people tend to see Cancer and Alzheimer's disease as theoretically curable, like polio, but aging as inevitable. There will always be the nay sayers until the cure arrives. We are very excited about the future possibilities from our specialized research. What good is it if we find your cancer cure, heart disease cure, or stroke cure if we just turn around and let you die from old age. Those of us who have become convinced that aging is the root of nearly all late–life illnesses have not yet won over those of you who have the power to fund further research. For those of you who can see the light at the end of the tunnel for curing old age as we see it clearly shining on the other side of that tunnel may contact Gerald Armstrong from Gen Cells Cures. We can discuss your personal involvement in the cure for old age and other incurable diseases. Yes, even one person can make a difference in our futures and that one person could be you.

Visit his group for information about "the cure" for incurable diseases and aging.

Group address

Hello, Ladies and Gentlemen, I am Gerald Armstrong the owner of Gen Cells Cures a biotech dedicated to finding "The Cure" for incurable diseases and aging. Introducing to the world, the miracle of private, personalized medical research for the individual. I am passionate about molecular biology and what we can do with science to find "The Cure" for those of you suffering from aging and incurable diseases.

A Cure For The Age Old Problem Of Hair Loss

By Scott Michaels

Men aren't the only ones looking for a cure for hair loss. Some women are also affected. One solution is delving into the Internet for answers. Cyberspace will provide you with a number of solutions to this confidence–breaking problem. You can even sift through a variety of reviews posted by individuals who have tried specific products.

Depending on what you're willing to spend, there is surely a cure for hair loss suitable to you. I recall when my older brother began losing his dew toward the end of high school. I felt awkward about this I must admit. Why do some guys start losing their hair at such a tender age? Much actually depends on genetics and stress. I'm guessing it was stress in this case since my mother's father has a full head of hair.

The Cure For Old Age

If you watch television, then you've most likely spotted a hair loss commercial or two. Those sometimes quirky, yet cheesy ads don't offer much solace when we start going bald up top or the forehead starts to expand. Luckily there are quality solutions at hand. The first step you should take concerning a cure for hair loss is consulting a family doctor or possibly a trichologist. He or she will be able to present you with some decent options.

The good news is many of these products are effective, but not so expensive these days. You can get your hair back. You just need to exhaust your resources in order to pinpoint that perfect cure for hair loss.

This certainly is the simplest choice, but it doesn't have to be your only option. You can find an effective cure for hair loss if you do your homework. In the cosmetically advanced world we currently reside in, there's no reason why you have to take your hair loss like a man.

Are you in desperate search of a cure for hair loss? Many men across the world are going through a daily struggle with hair loss. The inevitable affliction sadly becomes a reality for many of us. Although most men do not prefer a bald scalp, some are taking this route and avoiding the struggle altogether.

This can be helpful in your search for the right and ideal cure for hair loss. You've simply got to love the Internet. If you discover an over-the-counter cure for hair loss, you can likely pick it up at any corner drug store.

Depending on what you're willing to spend, there is surely a cure for hair loss suitable to you.
