**The Impossible Machine**

**By Jim Henderson**

**The Impossible Machine by Jim Henderson**

There are a lot of complicated machines in the world today. Some are marvels of design and engineering. Only a few years ago, they would have seemed the stuff of science-fiction. Nothing invented today will be like the machine that I'm going to build.

I'm going to build a machine. It will be extremely complex, more than a television, or a VCR, or even a computer. This machine will be so complex that it will contain volumes of complicated information locked in a special code. Oh, and it operates itself, that's right! It doesn't need someone to "run" it.

What if I told you that it that it will be so smart that it can even repair and replace itself so it will never wear out? Even complicated machines wear out and have to be fixed. Even these machines don't operate themselves. But mine will! Wouldn't you like to have a car like that? Did I mention that it will even reproduce and replace itself. I mean it will create exact functional replicas of itself.

Sounds extremely difficult, doesn't it? Maybe impossible is a better word. I'm still not finished telling you about my machine. This machine can "fuel" itself so it won't need gasoline or batteries. It doesn't run on nuclear power either.

It will be in some ways like a small city complete with it's own transportation, manufacturing, even it own power plant. And laboratory, since it operates by complex chemical reactions, much too complex to even begin to describe here. With all this activity it will have to a waste disposal system too --- it cleans itself.

A amchine that could do all this would have to huge...wouldn't it? So with all this, how big will it be? What if I said my machine will be miniature? So small, in fact, that it will be invisible...almost. Unless of course, you use a microscope, a very powerful one.

Impressed? You should be! By now you know that I can't even begin to make this machine, even with all the technology today or in the next thousand years. So I'll confess right now that I can't make it, even if I wanted to. So it would be no way that it could just happen by accident? And I don't feel bad

## The Impossible Machine

that I can't build it because neither can anyone else. Not even a team of scientists, engineers, and inventors.

Now let me say that I am not talking about science–fiction, I am talking about something that is very real. And it's been around for thousands of years, too. It's not really a machine, though because no machine will ever be able to be so complex and do so many things by itself. A machine, by comparison, is a crude and stupid device. But this is real. It's called a "cell". Your body is made up of literally billions of them, each functioning on it's own without any instruction from you. They all work together with every other cell in the body to maintain and support life. They never go to class but you will have to if you want to begin to understand what little we actually know about them.

Maybe you were not aware that a cell was so much more wonderful than any machine made by man could ever be. And more complicated, too. More than any machine that could be built.

Which brings me to the question...Who did?

Jim Henderson is currently employed in the field of environmental regulatory compliance. He enjoys writing as a past time and has had several articles published in various on–line publications.

### **A Cotton Candy Machine Is The Most Popular Piece Of Concession Equipment!**

**By Mike Yeager**

A cotton candy machine is welcome at any festive occasion! Cotton candy is a favorite treat of young and old alike. If you are looking for concession equipment for a special event, you'll want to give the cotton candy maker top priority. A real crowd pleaser, there's always a line of people wanting cotton candy. Your guests will be delighted!

The cotton candy machine is a hot item for a fund–raiser. The raw materials are quite inexpensive, making for a wide profit margin. Cotton candy is so attractive, that once the first person has some, everybody notices and wants some too. A cotton candy machine usually pays for itself easily, making the rest of the sales pure profit for your fundraiser. Many people associate cotton candy with fairs, carnivals, and the circus. A cotton candy machine can bring that feeling to your event, however large or small it may be.

Cotton candy has been around for nearly a hundred years. The interesting thing about a cotton candy machine is that it can take regular sugar and melt it into a liquid. The machine then spins the liquid sugar at a high speed and forces it through several tiny holes. As the liquid passes through the holes and cools it becomes a wispy, cotton like candy; a treat that is colorful, light and very tasty...all made from your cotton candy machine.
