The NSTP (Non – Spatial Thinking Process) Theory as a Masterkey : Non – Spatial Universal Mechanics

By Dr Kedar Joshi

The NSTP (Non – Spatial Thinking Process) Theory as a Masterkey : Non – Spatial Universal Mechanics by Dr Kedar Joshi

The NSTP (Non – Spatial Thinking Process) theory, a published invention (2002) of Kedar Joshi (b. 1979) (i.e.Myself), a Cambridge (England) based philosopher, is a position that, in computer terminology, regards Universe as a Non – Spatial Computer and Space as a Virtual Reality (UNSCSVR). This model of reality can resolve the mysteries surrounding quantum mechanics (e.g. the wave – particle duality, the EPR (Einstein – Podolsky – Rosen) paradox, the Schrodinger's cat paradox), Zeno's paradoxes, the biological phenomena of 'protein folding' and 'cell development and differentiation', relativity, action at a distance (which is a rehabilitated mystery through Joshi's work), etc. All these mysterious phenomena are, in fact, multiple aspects of a singular underlying structure, composed of four conceptual elements :

- 1.impossibility of spatial mechanism
- 2.space as a form of illusion
- 3.phenomenal mind as non – spatial
- 4.intelligent orderly execution of spatial events through non – spatial mechanism

The NSTP theory is the unique theoretical representation of that structure. The NSTP theory is a philosophical / scientific masterkey that unifies apparently diverse phenomena through its powerful non – spatial mechanical framework.

The NSTP theory is based on

A] Three axioms (i.e. self – evident truths) :

(One's objection that these propositions are not axiomatic is nothing but one's inability to perceive the truth. These propositions are clearly axiomatic to the author.)

The NSTP (Non – Spatial Thinking Process) Theory as a Masterkey : Non – Spatial Universal Mechanics

- 1) Phenomenal mind (or feelings or qualia) is non – spatial. i.e. No kind of feeling, e.g. feeling of colour blue, can be represented by any spatial structure.
- 2) All kinds of experiences, even thoughts I know I am having, are feelings or qualias.
- 3) A phenomenally conscious self is a temporal stream of non – spatial phenomenal mental events. (A Non – Spatial Thinking Process (NSTP), as every feeling is itself a thought or idea.)

B] And two hypotheses :

- 1) Space (as a room or void out there : whether three or higher dimensional, bounded or unbounded) is a virtual reality (i.e. a form or projection of non – spatial mind, a kind of feeling).
- 2) Individual or local NSTPs are orderly (or thoughtfully) executed by a gigantic, central, or global

NSTP (rather a group of NSTPs), representing superhuman thoughts or ideas, in order to account for the order in the universe, e.g. the gravitational phenomenon. (The central non – spatial superhuman thoughts are processed in zero time because of no spatial limitations; e.g. in space it takes time to transfer data from one spatial location to another. Although a conscious human is nothing but an NSTP it is, at least partially, conceptually, as opposed to physically, bound to the spatial biochemical brain, and thus the core NSTPs introduce time lag in processing of individual NSTPs, where appropriate.)

Further, the existence of the central NSTPs is assumed for two reasons :

- i) In any machine where its peripherals are not intelligent enough to modulate (or be able to account for) their own behaviour there has to be some central intelligent part in the machine to bring out the peripheral happenings or phenomena.
- ii) As the laws of physics (or any other than those of pure mathematics or logic) are not logically or conceptually necessary there has to be a way to change the ways individual NSTPs are generated (or produced or executed). And for that to be possible there has to be some central intelligence existing in the form of (non – spatial) mental events, which itself could be modulated to alter the modulation of individual NSTPs.

Thus, in computer terminology, in the NSTP model of reality the hardware of the universe is composed of non – spatial feelings, while its central software is made of superhuman thoughts, and the peripheral software is made of non – superhuman ones.

Now take for instance the EPR paradox or some equivalent mysterious experimental quantum phenomenon (e.g. In 1997 experiments were conducted in which light particles (photons) originated under certain conditions and travelled in opposite directions to detectors located about seven miles apart. The amazing results indicated that the photons interacted or communicated with one another instantly or in no time. See Robert Nadeau, and Menas Kafatos, 1999. The non – local universe. 1st ed. Oxford : OUP. Back page.). According to the NSTP theory this is no longer a mystery as the behaviour of photons is just a form of illusion, a virtual reality (to non – spatial mind/s) which is actually

The NSTP (Non – Spatial Thinking Process) Theory as a Masterkey : Non – Spatial Universal Mechanics

modulated (or orderly executed) by hidden / core non – spatial superhuman mental events. (Again in analogy with spatial desktop computers such a photonic behaviour on the computer monitor screen has no slightest mystery surrounding it, as it is just a changing pattern of pixels which is modulated by some hidden software processes.)

The NSTP theory maintains both idealism (as reality is exclusively mental) and realism (as the material entities we see out there do have a real existence in the core central non – spatial mind/s, which would exist independent of any other mind perceiving them), and both mentalism (as reality is exclusively mental) and materialism (as mind is real, it is physical / material).

'Philosophy is written in this grand book – I mean the universe – which stands continually open to our gaze, but it cannot be understood unless one first learns to comprehend the language and interpret the characters in which it is written. It is written in the language of mathematics, and its characters are triangles, circles, and other geometric figures, without which it is humanly impossible to understand a single word of it.'

– Galileo Galilei

In reality the universe has no geometry.

– Kedar Joshi

The Superultramodern Philosophiae Naturalis Principia Mathematica : The Foundations of Superultramodern Physics, Mathematical Science, and Philosophy.

Most of the mysteries of the universe are out of the human belief that any mechanism has to be spatial. In reality the mechanism of the universe is non – spatial, whose appropriate understanding shall resolve those mysteries.

– Kedar Joshi (K.J.)

All science is either mathematics (characterised by utmost certainty, in case of pure mathematics, and precision) or philosophy (lacking what maths essentially has).

– K.J. (Inventor of Conmathematics : Conceptual Mathematics)

To be is to be intelligent.

To be is to be a machine.

To be is to be non – spatial.

To be real is to be physical / material.

All machines understand. However, only non – spatial machines understand concepts. – K.J.

Superultramodern science begins where ultramodern science stops (the prefix 'super' means above/beyond). In physics, its basic principle is that reality is non – spatial. At its heart is the NSTP theory which unifies many apparently diverse phenomena and solves most of the most challenging problems in modern science.

– K.J.

Dr Kedar Joshi, BSc, MA, DSc, DA, Cambridge, UK.

I was born on 31 Dec 79 in Bombay, India. At the age of 22 I invented the NSTP theory. All of my scientific ideas have been invented in a self–taught manner and mainly through intuition. In March 2004 I came in Cambridge, UK with the hope of realising my academic ambitions. Inventions – The NSTP (Non–Spatial Thinking Process) Theory, Conmathematics, and Superultramodern Science (Physics, Mathematical Science, and Philosophy).

Superultramodern Engineering (SEng)

By Dr Kedar Joshi, PBSSI, MRI

Superultramodern Engineering (SEng) by Dr Kedar Joshi, PBSSI, MRI

Superultramodern Engineering (SEng) is non – spatial engineering (in contrast with spatial engineering). It's a practical application of the NSTP (Non –Spatial Thinking Process) Theory, where the goal is to modulate the non –spatial superhuman engine in order to change the laws of nature and alike which no spatial engineering can ever achieve. The most likely way to do SEng is 'Meditation', with a constant passion/desire to change the laws of nature. (It's quite obvious that if space is a form of illusion and reality is non – spatial then no spatial activity would be helpful to delve into reality.)

Father of Superultramodern Science (SS)
