Tips About Electric Trolling Motors.

By John Francis

Electric trolling motors are being found more and more often onboard many fishing boats. Boaters

are discovering the many benefits electric motors have to offer. Most notable the fact they operate in silence and that they are environmentally friendly. In addition, their popularity is not hurt by the rise in gas prices. These motors do require care that is different from the average gasoline powered motors.

Electric motors operate differently than gas motors, so it is no surprise that they need different care. Electric motors use batteries to supply them with power. This means they have a whole different way of powering up. Any fisherman that has or is buying an electric trolling motor needs to check out the follow list of tips.

– Charging replaces filling with fuel. It may be extremely simple to pour in a little gas to get the motor running, but with electric motors it does not work that way. Electric motors must be charged. They require a battery charger. This can be an onboard piece or a piece that is kept on shore. That is up to the individual fisherman. The batteries are made to be run down and charged often so there is no concern over ruining them. However, the manufactures directions should be followed to ensure the motor batteries are not ruined.

– Always check the motor out before use. Stray fishing lines can easily tangle in the motor and cause major damage. It only takes a brief moment for the damage to be done, but it also only takes a brief moment to look over the engine to prevent that from happening.

– Do routine maintenance. Like any type of motor an electric motor requires checks and routine maintenance. Parts should be checked to make sure they are secure and in good shape. Fisherman should not assume that electric means no worries. Maintenance is still important.

– The motor should always be monitored when charging. This prevents it from getting turned on accidentally. A motor that is left running can easily overheat and burn out.

– Be friendly to the motor. Electric motors have parts that are kept cool by being under water, so it is important that the fisherman does not run the motor out of the water. It is also important to keep

Tips About Electric Trolling Motors.

general care in mind by not using the motor in weeds or mud.

These tips offer ways to prolong the life of and protect the electric trolling motor. Fisherman who are using an electric motor will benefit greatly from following these tips and any instructions offered by the manufacturer.

Tips On Buying An Electric Guitar

By Phil Morris

The electric guitar is the cornerstone of an exhilarating musical experience. A good guitar will enhance the musical experience. If you love all kinds of music then your electric guitar should be able to play all the genres of music well. But if you want to play a specific type of music like jazz or rock, choose an electric guitar that allows you to play only that type. If you are interested in purchasing an electric guitar, here are some useful tips to make your purchasing easier. It will give you a good idea about the things you should look for while buying the electric guitar.

Before purchasing the electric guitar, consider the following points:

- **Decide on your budget:** A good electric guitar can cost anywhere from \$99 to more than \$20,000. Hence you need to fix your budget before you start visiting the shop or going online to buy the product. Since the price range of the good electric guitar is high, once you fix your budget, it makes your task easier.
- **Choose the sound you want:** One of the vital aspects of buying an electric guitar is choosing the right sound you want. Some guitars are better capable of switching from blues to jazz to rock without anyone noticing a change. Others are meant for one type of music, so you cannot change the sound immediately. Before purchasing, listen to the guitar sounds of your choice. Consult a music expert to determine the type of guitar used in the recording. He will be able to help you determine the type of guitar that will help you achieve the same result as in the recording. Besides, you should be aware of the type of music you want to play to help you in the selection process.
- **Get the feel of the electric guitar:** If the guitar doesn't excite you when you hold it, it is not the right choice for you. Look around in other shops both online as well as in the market before settling on the perfect guitar for you.
