Tired Of Having Physical Imperfections

By Robert Thatcher

Discovery Channel's feature about Hollywood celebrities' latest technology approach to beauty,

seems quiet nerve-wracking. Beauty of that entertainment staff in this city runs thru the "knife," so the host states. It's no longer a tale-tell, a fact that has conquered even local celebrities anywhere of one's country of domicile. For the affluent, whose major way of life surrounds a network of exposure and physical display, as celebrities in the showbiz industry, Cosmetic Surgery is a core factor attaching them to better advantage in maintaining physical beauty.

It materializes the proverbial myth of the "Fountain of Youth," everyone's dream of that everlasting youthful beauty. Ironically, no matter what latest in technology is on hand, there's a time-run capabilities of our hormones to accept what has temporarily been fixed or inset into our bodies. Aging is a natural process; any surgery for that matter is only good as long as your body still accept it. Man's concept about his appearance does not limit to being just youthful. Many found themselves lacking the aesthetics of the ideal beauty. Man is never contented. Our physical body abounds in flaws that make us unhappy. Cosmetic Surgery everywhere gains fast access especially to those who afford it. Question, how much one surgery of any kind cost? Never mind says a low-income lady. I'll live and die with these physical imperfections.

Sure, the prominent and elite could compute to prepare for the process. It's no wonder, everybody in the showbiz and entertainment industry looks beautiful, blemish free, and shapely with lots of money in their wallet, and could repeat doing so in a lifetime if only to waive away undesirable looks of an aged. Submitting oneself to bodily flaw treatment, aside from the cost entailed is painful. Don't expect to distract nature without a degree of compensation. To alter what nature has instilled needs sacrifice. A patient on Cosmetic Surgery suffers great pain after the effect of the anesthesia, post operation. It's no joke, the host in that Discovery Channel states, "beauty" runs thru the "knife" in Hollywood. That's why care must be taken when qualifying a surgeon. Choose one that'd reached high levels of achievements on aesthetics, clinical experience, and continuity in his professional practice.

Updated research on Cosmetic Surgery is a primary concern to select a surgeon. Discussions of the process, care and expectations should be opened to develop confidence and understanding of the surgical outcome. Never hesitate to ask second opinions, how many can a surgeon work out in a

Tired Of Having Physical Imperfections

certain time, and how successful are the results. There are cases when a mistake in the process could cause death, featured in the local TV Patrol news. In the United Kingdom, specified by the Cosmetic Surgery Consultants, U.K. & Plastic surgeons, (Internet Explorer), Cosmetic Surgery, should be worked out only with those with the FRCS (Plast) on the Special Register of Plastic Surgeon list with the UK Medical Council. As the case maybe, what country it may be, it is highly safe to consult a competent qualified Registered Plastic Surgeon among the community of consultants. More females subject themselves to Cosmetic Surgical needs. Liposuction, facelift, tummy tuck, breast augmentation/reduction, nose lift, varicose surgery, skin grafting and rejuvenation, rhinoplasty, laser eye surgery, and others are in demand. Change in sex, in homosexuals, some proven successful thru the latest science technology. Bottom line? Beauty that exudes from the inside is still the best as it vibrates a pleasant sensation to everyone around you. It is lasting.

Travertine

By Joey Lewitin

Travertine by Joey Lewitin

Travertine is one of the most beautiful, versatile, and historically important stones used today. It is a form of limestone that is heavily compacted. Generally it is formed when minerals in streams or hot spring water, become deposited on river beds and dry out. If the chemical composition is calcium carbonate, then travertine has formed.

In its purest form travertine is a very pale color, however imperfections in its structural make up, such as the presence of iron, can cause beautifully colorful banding to occur across the face of this stone. Different minerals imperfections cause different colors, and the streaked nature of the imperfections cause different designs. This means that no two pieces ever really look alike. It is however grouped into quarry names where similarly shaded types of travertine are given common names.

Travertine is often used to resurface structures, in counter tops, flooring, and in cobble stones. It is also used in a number of unique stone home furnishings. It is not as hard as quartzite, or as smooth as marble, although it can take a honed finish. Travertine is also available as Tufa, and as onyx, a semi translucent stone.

Travertine is mined heavily in Italy, the U.S. and turkey. Historically it was used by the Romans, Byzantines, and ottoman empires in their ancient architecture. Today it is widely used both indoor and outdoor and is one of the most versatile components available on the market. It is easy to maintain and clean, it is durable, reliable, and it doesn't show dirt very
