Treat Yourself With Odessey Putters

By David Corey

Previously we discussed how your golf clubs and even the sunglasses you wear can determine the

outcome of your golf game. Another typical item that is often overlooked is your putter. If you two putt every hole, that is 36 strokes out of your total score. WOW! Having a putter that you're comfortable playing with is very important. Do you want to become boss of the moss? If so read the below write up before selecting a putter.

. Another typical

item that is often overlooked is your putter. If you two putt every hole, that is 36 strokes out of your total score. WOW! Having a putter that you're comfortable playing with is very important. Do you want to become boss of the moss? If so read the below write up before selecting a putter.

Odessey putters belong in the Callaway family of golf clubs. That alone tells you that they present some of the finest craftsmanship and highest levels of performance available on the market. That's because Callaway has a long record of outdoing its competition with innovative designs and novel clubs, such as the world-famous Big Bertha.

To his amazement, however, instead of being just a fragile hickory-shafted club, these Hickory Stick clubs were reinforced with steel. Their core was filled with the metal, which endowed the clubs with power and steadfastness. Callaway was so smitten by these clubs that he actually didn't just buy a set. He bought half of the company. (This would explain why later Callaway would invest in quality clubs like Odessey putters.)

Up to this point we've discussed just one particular type of putter. Please do not feel like this is the only type of putter you should buy. This is just one review of one company that is famous for quality putters.

Treat Yourself With Odessey Putters

There are several other companies that make high quality putters. Remember, it comes down to your comfort level. I personally play a very strange type of putter with a wide open stance. I will review this putter in upcoming articles.

The new company was called Callaway Hickory Stick USA. The firm spared no expense in attracting the finest talent in gaming design, research and development, and manufacturing. It quickly developed a name for itself as a producer of high-end golf clubs. The success inspired Callaway to buy out the rest of the company.

The legend of Callaway golf is not one of those 100 year old tales that start in Scotland. Instead, the story begins when Ely Callaway sold his former business, a vineyard, in 1981. At first Callaway leaned toward retirement, and like most men of his age, he took to golf to pass the time. One day, he was shopping in a golf shop in California when he spotted a pitching wedge that reminded him of the clubs of yesteryear.

The investment paid off enormously in the 1990s. It was all thanks to a little women called Big Bertha. Actually, she was no women if you were a golf ball, and she wasn't so tiny when compared to other drivers of the day. In fact, Big Bertha was the 1st stainless steel driver with a bigger head and more forgiving sweet spot.

Thanks to this club almost alone, Callaway became one of, if not the, top golf companies in the universe. This puts Odessey putters in very good company.

Well thank you for taking to time to read our review on Odessey putters. Remember how we discussed that comfort is the most important factor in choosing a putter. The majority of your strokes will be on the putting green and we hope to reduce that number by holing out more 1 putts. Oh yes, remember the most important thing, relax and enjoy your day.

Mizuno Golf Clubs reviewed

By John Woods

Using a variety of Mizuno golf clubs, especially the Mizuno putter, we had a bit of a hard time feeling contact, and feeling contact with the golf ball is everything in golf. Whether you're hitting an approach shot, driving, putting, or working your way out of a bunker, the need to feel the club face directly hit the ball is everything. This helps you determine what is going wrong with the shot.

The first time I used a Mizuno T P Mills putter for example, it got to the point where I dreaded the putt

Treat Yourself With Odessey Putters

when approaching the green. Normally you can watch the ball hit the face of a putter and know whether the shot has at least a chance of going in or not, but not in this case.

And that was the biggest problem...the Mizuno putter transferred no feeling from the face of the club to my hands. This means that you'll have a difficult time developing a solid stroke with it. The best way to describe it is to compare it to the old putters you might find at miniature golf places. It tends to make every putt feel like you're pushing around one of those concrete balls.

The design features of the Mizuno putters however, are outstanding. Like the Mizuno drivers, these golf clubs are lightweight and nicely balanced. Practice swings feel good and it's easy to keep the head of the putter from overly opening or closing during the putt. But even though the design is nice, this club affected our scores by adding 5 or 6 strokes due to all the missed putts.

So if you are thinking of buying one of these Mizuno putters, ask your local pro if you can try it for a round or two to see if you like it. If you're not able to try it first, our recommendation would be to pass on the Mizuno putter, BUT give some serious consideration to some of the other Mizuno golf clubs, like the Mizuno graphite driver and the Mizuno Utility Woods. They got the job done very nicely.

Best golfing success,

John Woods
