Try Crate Training For Your Pets

By Hallidae Thomason

There are many pleasures in life, but few are as great as owning and caring for one or many pets. I

have been a pet lover ever since I was a kid, and I have never owned less than three dogs at a time for as long as I can remember. My parents were dog lovers as well, and they raised us right. I remember being fascinated with methods for training our dogs from the time I was young. I loved learning about new ways to get your new puppies to stay in control. Crate training was one method that I constantly saw my parents using.

Basically, crate training is a method of training your dogs (and I guess it could be used for other pets as well). You use crates to put your dogs in during times of discipline as a way of training them into good habits and keeping them away from bad habits. Each time I have seen crate training used I have seen it work effectively.

When done right, crate training is a great way to train dogs. As a veterinarian, I am constantly helping my clients come up with creative ways to house train and teach other habits to their dogs. I quite often suggest crate training to my clients as long as they take the time to learn exactly how to make it an effective form of discipline.

Like any other form of training, crate training is only effective when it is done consistently and well. You cannot use crate training on a hit and miss basis and expect your dogs to respond well to your actions. You must learn the techniques of crate training and then be committed to sticking to your purposes once you begin the training. Dogs need consistency in discipline or they will never understand what you are trying to mold in them.

You can pick up many resources on crate training, or you can do an online search and find out more. It is becoming a more popular way to train dogs, so you shouldn't have any problems finding enough info to work with. Take pride in your dogs and take the time to train them to the best of your ability and with the most effective methods you can find. Crate training might just be the answer that you are looking for with your dogs. Grab some crates and start your training today!

Hallidae Thomason is a veterinarian that cares about seeing people train their pets well. She encourages the crate training method for most dog issues. See

Crate Training Your American Pit Bull Terrier: Will It Help Your Dog?

By Tim Amherst

Crate training is one of the most often misunderstood dog training techniques. Many questions often come up when discussing the topic of crate training such as: "How can I use crate training to teach my dog to behave?", "What are the pros and cons of crate training?", and "Is crate training safe to use as part of my overall dog training program?"

This article will definitely help you understand crate training and what it will do to you Pit Bull terrier. After you're done reading, I'm confident that you'll have a much better understanding of crate training.

I get many questions from new dog owners on the subject of crate training. Most people really have no idea what crate training is or what purpose it serves. Quite simply, a "dog crate" is an enclosed cage area that prevents your dog from getting into trouble.

You can crate train your Pit Bull both inside the house or outside. You'll want your dog to have plenty of room to stand up and lay down.

So what are the benefits of you crate training your Pit Bull? There are many few reasons why crate training your Pit is a good idea. One reason is that a crate will prevent your Pit from destroying the inside of your house when you are away. Eventually, you'll be able to leave your dog loose when leaving the house and he won't be destructive while you're gone.

Another example of when crate training can be helpful is when you're traveling in your vehicle for a long period of time. Allowing your dog to rest in his crate during the trip will ease his fear if he has any issues with traveling.

Lastly, crate training is a vital component to properly house training a new puppy. Using a crate to assist in potty training is a very good idea and will help cut your pup's learning curve down drastically.
