**Undergoing Laser Body Hair Removal**

**By Jeff Jefferson**

Laser body hair removal works better than most of the other methods out there mainly because it is not only painless but lasts far longer than others.

This is because it works by removing the hair from the very follicle, thereby prolonging the time it will take to grow back up again.

While laser body hair removal method is one of the best ways of removing unwanted body hair, it is important for you to know some facts before going ahead with it.

This fact is the high cost of laser body hair removal.

It is not at all cheap to do laser body hair removal. The cost is what usually scares people off, despite the benefits. Many people don't have the kind of money required for laser hair removal.

For example, for you to remove facial hair, you will undergo series of treatments. In some places, these series of treatments could cost upwards to \$1,000. There are even other types of laser body hair removal that costs as much as \$2,500 dollars or more.

Many people find it very hard to cough out this amount of money for laser body hair removal, despite the advantages it has over other methods of hair removal.

So, if you are considering laser body hair removal, it is important for you to make sure you have the money to pay for it before contemplating it. You could also look around for the cost effective place to undergo your laser body hair removal.

To make you feel better when paying the huge amount of money for laser body hair removal, you should know that it can last up to six to twelve months before you need another one. So, if you add up the cost you usually spend to remove your hair every week or month, it could be as much as the single laser hair treatment that will last you for many months and even up to a year.

### **Laser Hair Removal Versus Electrolysis**

**By Mark Bensen**

While electrolysis has been around for many years, laser hair removal is becoming a viable option for many. We'll take a look at both methods of hair removal and help you determine the best for your situation and needs.

The newest hair removal method to be put on the market is laser hair removal. Since advancements of all types of procedures using lasers have become more and more advanced in recent years, it is no surprise that lasers are now being used to remove hair. A wavelength of energy is omitted by the laser, working to kill the hair from its base.

The most appealing characteristic of laser hair removal is that after a small number of treatments your hair should be completely dead and you will never have to worry about hair on that specific portion of your body again. Laser hair removal treatments can be spread out farther than other types of hair removal treatment since the laser hair removal process slows the growth of hair.

Laser hair removal may seem like the most appealing hair removal procedure but there is a downside. Since laser hair removal is a relatively new procedure and can be high in demand compared to the number of specialists licensed to practice the procedure, the cost of laser hair treatments can be relatively high. In comparison to the other methods of hair removal, laser hair removal is by far the most costly.

A method similar to laser hair removal but that has been around much longer is that of electrolysis. When removing hair by electrolysis, the technician uses a needle that projects an electric current into the hair follicle, killing it at the root. By sending the current directly to the root of the hair follicle it prevents hair from growing back in the same spot.

Although it may take longer than laser hair removal, electrolysis is another way to permanently remove hair in a certain area. Like laser hair removal, this takes a number of repeat appointments for treatment. Electrolysis often requires treatment for anywhere up to a year to a year and a half for the hair to be completely removed. Like laser hair treatment, electrolysis can cause some discomfort and pain during treatment when the electric current is killing the hair follicle but it should not last longer than a few minutes after the treatment has ended.

With both treatment methods a viable option, laser hair removal provides the most obvious benefits.

## Undergoing Laser Body Hair Removal

You're able to spread out treatments and require fewer sessions to achieve the same results as electrolysis. That said, you're only problem may be finding a practitioner with an opening in her schedule!

Laser hair removal is becoming cheaper and more available nationwide. To find a local practitioner, visit
