Used cheap laptops – Buyer Beware

By John Ducharne

If you were going to buy a used car, you would take a look at the engine, check to see how many miles it had been driven, look for any dents and probably you would ask the owner why they were selling it, what problems it has had in the past, and how it has been renovated over the years. Just like you would do a background check on a used car, if you are thinking of buying a used laptop, you need to know what it has been through.

You can save a lot of money by purchasing a used laptop, but a computer's history is a lot more elusive than a car's. A refurbished laptop computer is one that was sold to a customer but sent back to the manufacturer because of problems, and finally fixed in a factory to be sent back to a store to be resold. Used cheap laptops are different than this and they are rarely accompanied with a warranty.

Used cheap laptops are a risky investment – maybe someone simply ditched their laptop because they no longer had any need for it or wanted to upgrade to another brand out of curiosity or personal preference. In this case, their secondhand laptop will be a really cheap, worthy buy (assuming the particular laptop is what the consumer wants). Unfortunately, many used cheap laptops may simply be defective and no matter how inexpensive they are, there is no reason to buy them only to encounter problems later and be forced to replace it.

Communication with a store employee or the previous owner of the laptop is the only way to ensure that you buy a reliable, used computer. Ask questions about why it's being resold; if you feel you are not getting an honest answer or that you receive a hostile reaction, move onto your next option!

Buy a Cheap Laptop or a Cheap Desktop?

By Charles Wee

Should I buy a cheap laptop or a cheap desktop?

You may find yourself asking that question many times while shopping for a computer. This guide offers you the pros and cons of owning a laptop versus a desktop pc.

Processing speed

Comparing processing speeds, laptops usually lag behind their desktop counterparts. With the rapid advance in microchip technology, the gap between them will become smaller.

Wireless

Most laptops especially those with Intel mobile chips come with wireless capability out of the box. This means you can get online from any location at home easily without ugly wires if you have a wireless network setup at home. Desktop pcs do not typically provide this capability out of the box although that may change in the near future.

Memory

Memory chip tends to be more expensive in Laptop than desktop pcs. If you buy a laptop with less than 512MB ram, be prepare to pay more for memory upgrades than you have to with a desktop pc.

Graphics Display

Because of the size of a laptop, most business or entry level laptop use integrated graphics with limited ram. This means most laptops even some expensive ones cannot run graphics intensive applications or 3d games as well as a desktop pc. With a desktop pc, you can buy a dedicated graphics card just to serve a graphics intensive application.

Portability

Portability is why everyone wants a laptop these days. Because of their size and weight, it is easier to carry a laptop around as opposed to a desktop pc.

Screen Display

Everyone buy laptop for their portability so laptops usually do not come with screens as big as their desktop counterparts. The screen technology used is usually not as good as those used by desktop pc. Furthermore with a desktop pc, you can always upgrade to a bigger and better screen whereas for laptop you are stuck with the same screen display for the whole lifespan of the laptop.

Upgradeability

Laptops do not offer many upgrade options. You can only upgrade memory and hard disk. With a desktop you can upgrade almost anything and only limited by the motherboard. This means a cheap desktop pc offers a longer lifespan than a laptop.

Used cheap laptops – Buyer Beware

So whether you should buy a cheap laptop or a cheap desktop, ask yourself what are your needs? If you want to be able to use a computer wherever you go, then you are looking at a laptop to fulfill your needs. However if you do not require the portability of a laptop, play a lot of 3D games, graphic intensive applications, if you care about upgradeability to prolong the lifespan of your investment, then desktop pc is a smarter choice for you.
