**We are Going to Live on Mars**

**By Arthur Zulu**

**We are Going to Live on Mars by Arthur Zulu**

Good news is hard to come by these days. But alas there is one. Man will soon be living on the red planet Mars.

The Journey started on a good foot. The space rocket Spirit successfully landed on the planet. It began photographing and digging up Mars and sending messages back to the earth that will soon be vacated. And there is back slapping and clicking of glasses as we drink our wines. And we pray for Spirit and her sister rocket to discover water (we need it badly) and perhaps some demand microorganisms hidden in rocks.

That is the first phase of this Martian expedition. The next stage will be a manned flight by two dare-devil astronauts, who will be willing to make history by taking the two-month long trip. In order to make the trip exciting, the astronauts would first have to set camp on the moon. Yes, they would really have to take off from the moon to Mars. (This is not fiction.) And then after several successful flights and mapping of Mars, model houses would have to be built ahead of the Martian exodus. But why you may ask, are we migrating to Mars?

The first reason is that terrorists have taken over this "hell" of a place called earth, and nobody is safe anymore. Even if you were living on the tallest building or hiding in a cave. Cave? That is the worst. Because all the terrorists are now living under the mountains and spider holes in the bushes far from the prying eyes cameras and secret agents.

The other reason is that there is so much crime on this earth. Think of the murderers, the robbers, and the rapists. Too many guns! Too many bad people. Someone has either been murdered, robbed or raped as you read this. If that person is not you, give glory to God.

Additionally, this earth has been polluted beyond any saying of it. The seas have been turned into sewers, toxic wastes dot the land, while fog have taken over the atmosphere. So you can see that this earth is no longer safe for habitation.

## We are Going to Live on Mars

Religious fundamentalists are not even helping matters. These preachers of hate encourage their followers to go about with knives hidden under their robes and bombs strapped to their waists with the intent to kill the infidels and get a one-way ticket to heaven. And since there are so many heaven lovers, the infidels' who are dwelling on earth have no place to hide. So these are the reasons why we must all vacate earth and go to live on Mars.

But make no mistake about it. It will be easier for a camel to pass through the needle's eye than for you to get visa to Mars. Because there would be physical, mental, and moral security since no social psychopath would be needed on Mars.

First, you would be photographed and finger printed. Then you would be required to pass through a machine that would search even your inside for weapon possession. And then psychiatrists would have to examine your brain for mental fitness. Meanwhile, the Interpol is double checking your past for any hint of crime record.

If you pass all of these, you would then go to the moon for space travel orientation and survival drills. The course is rigorous because it includes how to survival on zero gravity, survival without oxygen, and how to survive below freezing point. If you pass that, then you have to think of how to pay your ticket fee to Mars. Because the amount is equal the annual budget of poor nations. And because we are not going to turn to spirits and fly to Mars.

Since Mars is a very cold place, departure to the planet will be in this order. Those who live in the polar regions— the coldest spots on earth — will go first. In that case, Greenlanders and Netherlanders in the north, and the Australians and New Zealanders down under, would make up the first settlement in Mars. Lucky' folks. The Europeans and Americans would follow. Of course the Africans who are sun friendly, would bring the rear.

When the good people would have been spirited' to Mars, a rocket would be sent back to earth with fire to burn the terrorists, the murderers, the robbers, and the religious fanatics. (Since they are not with us, they are against us)

Up there in Mars, there would be no terrorist, because no one is allowed to carry guns. Except the governors of Mars who made the Martian dream a reality. And in an atmosphere of peace, we recline on the red planet and drink our red wines — made in Mars of course.

Many years after, the story would be told to our grand-children of how a certain earth was destroyed. And they would look down from Mars and pity former planet earth. But I fear that after our generation is gone, some terrorists would spring up from Mars and our grandchildren would destroy the planet and head for Jupiter and pass on the story to their grandchildren.

Now let the journey begin.

ARTHUR ZULU an editor and book reviewer, is the author of the controversial book, CHASING SHADOWS!: A Dream. (A book that reveals the terrorists' master plan to finally set the world on fire!) For a copy of the book and FREE excerpt, goto:

## **The future of the Human Species – Part 2:Where next?**

**By K.A.Cassimally**

### **The future of the Human Species – Part 2:Where next? by K.A.Cassimally**

Many scientists are currently exploring the idea of going to live on Mars. Mars is the nearest planet to Earth and scientists actually think that the red planet resembled our Earth some million years ago. Some other scientists from the NASA Ames Center have already started the creation of a `Mars town' and many others are in fact already experimenting it. Of course, these experiments are done on Earth itself but this `Mars town' has an environment practically alike to that of Mars. And the perfect place for the conduction of this experiment is in Texas, USA.

The astronauts working in these towns wear their space suit and also do everything they would really have to carry out if they ever go to Mars in the future.

But Mars would be, like Earth a temporary place for humans. When the Sun starts engulfing the planets, Mars will disappear barely hours after the earth. So Mars only seems to be the ideal place to spread the human species. It is also a good location to send humans if ever there is a disaster on Earth. By saying disaster, I mean asteroid collision and things like that.

If we, humans do not want to disappear when the earth or mars get swallowed up, we will have to go and live beyond the solar system. But are there any planets outside our solar system prepared to support life? Astronomers' answer is:

"If Earth can support life, why can't other planets do same too? Astronomers have already discovered a Jupiter-like planet orbiting a Sun-like star so why not an Earth-like planet orbiting a Sun-like star next?"

Astronomers clearly think that, yes, there has to be other planets alike to Earth waiting to be colonised out there. And maybe, these planets will in the future hold our species.

But in all cases, this is exactly what some astronomers have in mind: transplant the human species to these planets before it is too late.

Before colonising places outside our system though, it is logical to try and colonise our neighbour, Mars.

To achieve this goal though, many other problems have to be taken into consideration. How do we

## We are Going to Live on Mars

transform a dusty planet like Mars into one more or less alike to our Earth? How should we proceed? Before we plan to perform any of these though, we should ask ourselves whether we are really prepared to go out there where nobody has ever gone.

K.A.Cassimally is the editor in chief of Astronomy Journal and Astronomy Journal Ezine. He is also the co-founder of the RCPL Astronomy Club. K.A.Cassimally is best known for his article 'Harry Potter and the Moons of Jupiter'. He is also Senior Columnist at BackWash.com where he writes 'Not Scientific Science'. Website:
