What Are The Lasik Procedures?

By Tiara James

The LASIK surgeon uses computer software to guide the IntraLase laser beam, which applies a series of tiny (3-micron-diameter) bubbles within the central layer of the cornea. The resulting corneal flap is created at a precise depth and diameter pre-determined by the surgeon. As occurs with a mechanical microkeratome, a small section of tissue at one edge of the flap is left uncut, forming a hinge that allows the surgeon to fold back the flap so that the cornea can be accessed and reshaped for vision correction.

LASIK has proven to be a safe and effective method of laser eye surgery as recently published in the British Journal of Ophthalmology by Ophthalmologist Professor Michael O'Keeffe reporting the results of a long term study commenced in 1998 and 1999 whereby LASIK patients were followed for a period of 5 years.

The LASIK Procedure

1. Anesthetic drops are applied to the eye.
2. A protective flap is created and gently lifted by the surgeon, revealing the inner corneal tissue.
3. Computer-controlled pulses of cool laser light are applied to the inner layers of your cornea. As the laser pulses, it makes a ticking sound. The inner corneal layer is reshaped with the laser to mimic your contact lens or glasses prescription.
4. The surgeon gently replaces the flap and aligns it to its original position. It heals naturally and securely.
5. Some patients may feel slight irritation for a few hours, but most are quite comfortable after a nap and rest.

Are there Follow Ups after Lasik Treatment?

What Are The Lasik Procedures?

Most patients are usually seen the day following the treatment and then at least 1 month and 3 months following the treatment. Some patients require more visits. Remember, we are available 24 hours a day when you have any questions, concerns or need attention.

So, we urge you to find out more about Lasik Surgery today!

LASIK is the most commonly performed refractive Eye Surgery procedure. Find out more about LASIK Eye Surgery at

Educate Yourself – LASIK Eye Surgery Could Be For You

By Nicola Kennedy

It might be the case that you are tired of wearing glasses, or you believe that it cramps your style. You also don't want to use contact lenses, in order to avoid infection or inflammation due to overuse. In such a scenario, you are likely to consider LASIK eye surgery, which is one of the most prevalent vision correction procedures. And therefore, you require some basic LASIK education, in order to get a clear picture of what you can expect from LASIK if you want to know whether you should do eye laser surgery.

If the light rays don't focus on the retina (light-sensing cells), the image you see is blurry. This is termed as refractive error, and may be caused due to an irregularly shaped cornea. LASIK surgery involves carving of the cornea in order to give it the perfect shape, thereby making light rays focus on the retina. LASIK surgery employs a high-precision laser, named Excimer, which is an ultraviolet chemical laser.

Scads of people have undergone LASIK, and most procedures have been successful. But as with any surgery, LASIK has associated risks and complications. However, LASIK has a relatively low complication rate, between 1% and 5%, which is among the lowest in the eye surgery field. Another trivia from the chapter on LASIK education is that LASIK may not result in perfect vision. That is, not all patients achieve a 20/20 vision.

If you suffered from myopia and have undergone LASIK as a corrective procedure, you would still require reading glasses (for near vision) in your late 40s. LASIK is an irreversible procedure, and most insurance companies do not cover LASIK surgery. Therefore, make sure that your surgery is performed by an experienced ophthalmologist. Also note that only eye MDs (ophthalmologists) are permitted to perform LASIK surgery.

Now that you are aware of the ins and outs of LASIK surgery, decision making is much easier. Have a discussion with an experienced ophthalmologist. It might be the case that you could very well forego the surgery. But if need be, LASIK is a superlative option to correct your vision.
