What You Should Know Before Buying A Wine Rack

Don't place wine cellars above or near refrigerators. Refrigerators generate heat and this heat could ruin your wine collection. Buying and installing a good wine rack would be useless if that happens.

Your rack has to be smooth enough that when the wine bottles are put and taken, they will not get scratched and damaged. Bottles and labels are also important parts of the overall value of wine.

A wine cellar is great but not necessary to store your wine in the correct environment. But since not everyone can afford a wine cellar or has space enough for one, you could opt for a wine rack instead. Wine racks function a lot like wine cellars, but they are smaller and are more accessible. They are also a lot cheaper and easier to install.

Believe it or not, ultraviolet light can affect and ruin wine. That's the reason wine cellars are so dark

and that's why you have to keep your wine in a dark safe place. When you store your wine bottles, make sure they are stored sideways; this ensures that the wine is always in contact with the cork to keep it moist.

Once again we cannot express how important it is to maintain the right conditions for your wine to mature nicely. Your wine rack system has to maintain the right amount of humidity and temperature to keep your collection going. Bear in mind that wine is something you keep for a long time. Keep your wine racks pumping a temperature range of 55–60° F. Also make sure the humidity is in the 50% to 75% range. Adjust these settings according to the needs of your wine.

Picking The Perfect Wine Rack For Your Home

By Ken Finnigan

For many people starting out, it can be a very difficult and oftentimes overwhelming experience picking out the perfect wine rack. While there are many things to take into consideration when deciding which rack is perfect for your needs, deciding which rack to use to store your collection should never be a cause of stress.

One of the first things to consider when choosing a wine rack is whether you want to store your wine in

What You Should Know Before Buying A Wine Rack

a vertical or horizontal rack. While some prefer a vertical rack because it allows the labels to be easily viewed, wine stored on these types of racks are more likely to have the cork dry out and shrink causing air to enter the bottle and contaminate the wine. It is for this reason that horizontal wine racks are the most popular choice.

The second and third factors to take into consideration when picking a wine rack are the material it will be constructed of and the style of the rack. There are a variety of styles of wine rack, the most conventional being wall mounted, counter top, hanging and free standing. The most common wine racks are made of metal or wood. If metal is your preference, you can select Vintage View wall mounted wine racks, counter top wine racks, or custom made wrought iron or steel hanging or free standing wine racks. While metal wine racks are commonly made from wrought iron or steel, wooden wine racks are available in an array of finishes. The most frequently used woods used to construct a wooden wine rack are maple, mahogany, and walnut, however pine and redwood are also often used. Choose from single or double finished wall mounted wine racks, free standing wine racks such as Wine Cubes, Waterfalls, and Curved Corner Racks, or counter top racks such as the Pyramid wine rack.

The last thing to consider before purchasing a wine rack is the size of the rack and the cost. Wine racks for personal collecting can cost anywhere between \$20.00 and \$1000.00, it all depends on the size, style and finish. Even though there are a few things to consider when purchasing a wine rack, the variety of racks out there means that finding the perfect rack for your wine collection is simply a matter of knowing where and what to look for.
