What is Satellite Radio

By Aurel Radulescu

Satellite radio is still a somewhat new concept to the modern world. Gone are the days of hopping in the car, turning on the radio and listening to endless commercials without even hearing a single song. Satellite radio is very similar to the concept of pay-per-view television. In exchange for a membership fee, you receive virtually commercial free programming specifically based on your desire.

Satellite radio companies own exclusive rights to certain content, including some sporting events. This means that the only way to hear a game being broadcast may be to subscribe to that service on satellite radio. The same is true of various other content, including the recent move of Howard Stern exclusively to satellite radio. His talk show will only be available through a paid subscription and will no longer be broadcast on regular television or radio programming.

Membership fees range from several dollars per month to several hundred dollars for a lifetime membership. The decision of how to pay is at the sole discretion of the consumer. If you plan to be a lifetime customer, and have the cash to spare, there is no doubt that a lifetime membership will pay for itself over time. If, on the other hand, you're new to the concept and just want to try it out, many satellite radio companies offer a free trial or low monthly fees to get you started.

The concept of satellite radio derives from, as the name implies, receiving satellite signals to direct certain programming into a radio. This can be a portable gadget, such as a small radio, or it can be installed in your vehicle or even heard through satellite television. Satellite radio provides more than five dozen channels, also known as streams, of music and fifty-five channels featuring sports, news and entertainment broadcasting. Music offered includes virtually every genre and is available every day, all day and is commercial free. With a typical Sirius radio, the consumer will be able to see the song and artist information displayed on their digital screen while listening to the music.

Satellite radio is a new trend that is sure to become a permanent fixture in the industry. With technology making new advancements at every turn, more and more people will look to satellite radio for their listening pleasure. Everything from sports and entertainment to talk shows and music are becoming the exclusive property of this new technology. Companies compete for the best programming, offer multi-million dollar contracts for big name agreements and are spending the big bucks to ensure that people keep tuning in to their station.

Satellite Radio Antennas Are More Than Useful

By Carl Walker

What are satellite radio antennas and what are their uses? This is the question that many people ask themselves when they hear about satellite radio antennas. As you read this article you will get an idea on what a satellite radio antenna is. Also you will learn what are their uses, functions and a lot of great pointers on where to buy one, what types are there and how to take care of it.

In order for you to listen and watch your programs you need a satellite radio antenna. This allows the module that you are using to communicate with its home base; the home base includes all of the programs and it allows you to choose what you would like to view. This all sounds like something out of a sci fi movie, but it is not. Your television, radio, even your computer has a satellite radio antenna.

Now that you know what satellite radio antennas are here are some of their main functions and uses. When you turn on your satellite in order for you to watch any of your programs on it the main thing needed is the satellite radio antenna. It allows the base (your PSP) to communicate with the main base of the whole entire system. This gives you the ability to either listen to your music or watch your programs, which ever you may choose.

Many people wonder where they can buy satellite radio antennas. You may buy one in your local hardware store. There is no specific company you should purchase your antenna from because different companies make different types of these mechanisms.

The different types usually go based on the use of the satellite radio antennas. You may be buying it for your car, bike, and stereo system or maybe even just for your house. They all have the same functions and every company that makes them to does their best to suit you and all of your needs.

The best way you can take care of you satellite radio antenna is to keep it out of water, as we all know

What is Satellite Radio

electricity and water are not what we could call the greatest of friends. Also, these should be kept out of the reach of any young children; if yours is already inside of something you should make sure that it stays in there but if not any young child can swallow it and cause much harm. If this does happen please alert the police department as quickly as you can.

Now that you know what satellite radio antennas are, their functions, where to buy one and how to care for it you are ready to buy your own. Always keep in mind that depending on what size and type of a satellite radio antenna will vary in its price range. If you buy something for cheap it won't last too long but you did not spend that much money on it, but if you buy something expensive it will last longer even if you did spend that extra hundred dollars on it.
