Work Efficiency – Are Employees Really Overworked?

By Bartosz Lewandowicz

The Statlook system's unique function is tracking the company's computer usage mode. A wide range of cross-sectional reports illustrates the users' activities in each period of time and in the context of used software. By means of the Statlook system you can practically control all employee activity, beginning from the registration of Internet site visits, through the usage of each application and documents opened statistics, control of software installed, as far as the ability to view the screenshot and counting the keystroke rate.

Miscellaneous reports present very clearly which applications were used most often as well as which of them and for how long were in the foreground. On one hand, it allows you to assess the applicability of software installed, and on the other hand it may be the basis for assessment of employee commitment in completing his tasks.

Statlook then combines two functions: it allows you to use your application licenses rationally and significantly enhances office labor efficiency.

Normally, the first tangible results can be noticed right after the implementation of Statlook. The employees' awareness of the presence of the Statlook system on their computers is enough to obtain measurable effects within a very short period of time. Many non-productive activities will be reduced drastically as soon as Statlook is installed.

Due to its reasonable price, universal appeal and operating ease, Statlook gains popularity in Europe and the United States. The number of the companies that apply this tool exceed 5000 at present.

An internationally operating company A plus C Systems is now creating its authorized partner system. Negotiations are conducted with several leading IT companies, among which are software resellers, network integrators, and hardware providers. They are engaged in implementing safety procedures as well as Software Asset Management. By the end of the year, A plus C Systems intends to gain 50 partners all over the world, offering them very good business conditions as well as full technical and commercial support.

Gas Saving Tips 1 – Use Less Gas And Save Money

By Doug Smith

You have probably heard these gas saving tips from the Environmental Protection Agency (EPA), the Federal Trade Commission (FTC), and whoever taught you to drive. Yet very few people actually bother to implement them.

Why is that? Are people tired of hearing them? Have these gas saving tips been said so many times that people tune them out? Well, you are going to hear them again in this series of articles, along with the reasons why they DO work!

Gas Saving Tip #1: Know Your Vehicle's Fuel Efficiency

The actual fuel efficiency of your car will probably differ from that stated on the price sticker. Variables such as make, model, weather, city or interstate driving, and driving habits will affect the fuel efficiency. Efficiency is measured in miles driven per gallon of gasoline used (miles per gallon or mpg).

That is why you should periodically calculate your vehicle's fuel efficiency. If you see it decreasing, you know that something's not right with the engine and can take quick action to fix it.

Some people are unaware of how to properly calculate fuel efficiency. It is more than simply dividing miles by gallons. For example, if someone drives 500 miles and then buys 1 gallon of gas, the fuel efficiency is not 500 miles per gallon!

Here is the proper method to calculate fuel efficiency in mpg:

1. Fill up your gas tank. Do not top it off. 2. Write down the starting mileage. 3. Drive until the tank is almost empty. 4. Fill the tank up again the next time you need to buy gas. 5. Write down the ending mileage. 6. Write down the number of gallons of gas it took to fill up the tank. 7. Calculate the Miles Traveled as the Ending Mileage minus the Starting Mileage. 8. The fuel efficiency in mpg = Miles Traveled / Gallons Used

Example:

A driver fills up her tank when the odometer reads 25,000 miles. When the tank is almost empty, she fills up with 18.5 gallons, and the odometer reads 25,500 miles.

Starting Mileage = 25,000 miles Ending Mileage = 25,500 miles Miles Traveled = 25,500 – 25,000 = 500 miles Gallons Used = 18.5 gallons Fuel Efficiency = 500 miles / 18.5 gallons = 27 mpg

Work Efficiency – Are Employees Really Overworked?

If her next efficiency calculation under similar driving conditions is only 20 mpg, she knows that something is wrong with the vehicle.

As gas prices go higher, the need to save gas and save money on fuel is greater than ever. More gas saving tips can be found at the website below.
