123 Target Marketing

<http://www.123target.com/publication.html>

Tragically, too many have been led to think that once you place a website on the Net, millions of people will flock to it. You rarely hear it directly in those words, but unfortunately there are those who *have* said exactly that and those who have bought it.

The cow didn't *really* jump over the moon.

But you certainly have been told that there are millions of prospects on the internet (true.) You've read that if you sell someone's ebook you'll get a sales-proven website to use (again, true.) Countless times, you've been shown fabulous MLM compensation charts that demonstrate how much money you'll make selling for them (conditionally true.) That's where most stop and pitch their close.

What they don't tell you is how to effectively attract buyers; OR if they do tell you, they don't show you.

There are reliable, proven ways to attract visitors and turn them into buyers. There are different strategies for sales than there are for free sites, membership sites and product or service branding. Strategies predict or attempt to predict the outcome.

With a marketing plan and objective you can *know* what your desired goal is and have a pre-defined, achievable destination mapped out. Tactics are the tools for carrying out your plan and arriving at your objective.

Chart your objective. Do it in writing. Knowing your business and your goals is the first step to marketing success.

"...the Cow Jumped Over The Moon"

Commitment is a vital ingredient to the success of your marketing plan. The mistake made by most budding entrepreneurs is to assume that the internet will bring automatic success.

99–44/100% of the time internet marketing *success* is purely commitment and 'stick–to–it–tiveness.' See your project through and don't dump your venture (unless you discover some inherent fatal flaw.) Test, test, test.

See your marketing tactics and testing as the fascinating process that it is rather than a drudgery. Almost certainly there will be temporary setbacks but stick to your marketing plan and goals! In simplest terms *this* is the formula for success.

With that formula, you won't be wandering in the dark singing "Hey Diddle Diddle, The Cat and the Fiddle."

The moon and the sun

By Mohammad Ali Abid

The moon and the sun by Mohammad Ali Abid

Astronomers found that the moon movement is 18 kilometers per a second, the Earth movement is 15 kilometers per a second, whereas the sun movement is 12 kilometers per a second. The sun, the earth & the moon all run & the distance between them is regularized. Quran explained this fact before fourteen centuries. It says "And the sun Runs his course for a period determined for him: that is the decree of (Him) the exalted in Might, the All Knowing. And the moon we have measured for her Mansions (to traverse) Till she returns like the old (and withered) lower part of a date - stalk. It is not permitted to the sun to catch up the moon, nor can the night outstrip the Day: Each (just) swims along in (its own orbit) (According to Law) [36:38–40]. What does "Ali runs And Mohammed moves and Ali cannot reach Mohammed runs but Ali does not reach Mohammed. Here Allah the Excelled in might says "And the sun runs his course for a period determined for him" Then He says " It is not permitted to the sun to catch–up the moon" This means that the moon is meant to be before the sun where as the sun runs and can not catch up it. Because the speed of the moon is 18 kilometers & that of the earth is 15 kilometers while that of the sun is 12 kilometers. Whatsoever the sun runs it will not catch up the moon. But what makes the moon also to retain its mansions while it can leave them? The astronomers found that the moon runs in a zigzag swing and not in a straightforward line. The moon runs in this manner to retain its mansions and locations. In this manner Allah organized and systemized the orbiting &more movements of all of them so that they retain their orbiting traces & do not depart them. Therefore, we have the regular succession of Night & Daytime, seasons etc.... Don't you think it is an

excellent determination? Is it possible that it has come only by chance? No, it has not come by chance because chance cannot create such excellent & systematic norms of the universe. Allah has created all this & creates this systemic cosmic norms. Source: "The Age of Faith has dawned"
